Pressure equipment

Standard boiler operation (BS)

This licence authorises the operation of a boiler with a single fuel source that does not have a pre-heater, superheater or economiser attached.

Standard boiler operation is the normal running and monitoring of a boiler to produce steam or hot water safely and efficiently, under routine operating conditions.

A person carrying out standard boiler operation typically:

- starts up and shuts down the boiler following procedures
- monitors pressure, temperature, and water levels
- checks gauges, valves, and safety devices
- adjusts controls to maintain safe operation
- identifies and reports faults or abnormal conditions
- carries out basic routine checks and maintenance.
